

Summit Nutritions™

PHARMACIST FORMULATED

Clinical Dosage • Most Affordable • Premium Supplements

Summit Nutritions manufactures premium quality Pharmacist Formulated natural dietary supplements.

Each of our products is thoroughly and professionally formulated by a team of licensed pharmacists and pharmaceutical chemists. Only after exacting primary research of possible nutrient combinations, we select the purest active ingredients and additives. Clinically effective dosages are determined and our unique formula is designed, based on the most up-to-date available clinical studies.

All of products are tested in an FDA DEA registered laboratory utilizing established standards to ensure purity. Our QA team, together with our manufacturing and compounding teams, ensure that our supplements meet the official standards of compendia, of the United States Pharmacopeia (USP) and the National Formulary (NF) Pharmacopeias. Our organic products have been certified by the OTCO (Oregon Tilth) according to the US National Organic Program 7 CFR Part 205.

Quality Assurance Commitment thru NSF Product Certification Program

NSF is the only independent third party organization that offers true testing of dietary supplements under NSF/ANSI 173 standards. NSF conducts the testing of ingredients in their own accredited labs to confirm the content of the ingredients listed as well as to check for harmful unlisted ingredients by continuing annual audits and periodically retesting each ingredient throughout the product cycle.

NSF Contents Tested & Certified

- Label claim review, testing ingredients and certification
- Toxicology review and certify product formulation
- Contaminant review and certification.

Contents Tested & Certified
www.nsf.org

NSF Certified for Sport

- Intended for use by athletes, protects against adulteration with verified label claims
- Screened for more than 200 banned substances by most and major athletic organizations
- NSF Certified Sports is recognized by the NFL, NFL Players Association, MLB, MLB Players Association, PGA, LPGA and the Canadian Centre for Ethics in Sport.

Certified for Sport®

NSF Certified Pure Vegetarian Omega 3s - EPA+ DHA+ CoQ10

Clinical Strength Formula - 300% more EPA/DHA than krill oil as recommended by American Heart Association

Original Source - Omega 3s from the original plant source with NO fishy characteristics.

Bio Active CoQ10 - Piperine infused CoQ10 increases bioavailability by 30% more than CoQ10 alone.

Eco Sustainability - Microalgae is grown outside the sea, a direct sustainable source of Omega 3s

Why Summit Nutritions Vegetarian Omega-3s are better:

Why is it called a "Premium Heart Support" formula?

Omega-3s (EPA & DHA) and CoQ10 are the most popular and clinically proven supplements for healthy heart support. Consumers take two supplements separately so we made the premium formula which has Omega-3s (EPA/DHA) and CoQ10 in one product at their clinical strength.

Why are Vegetarian Omega-3s better than fish oil Omega-3s?

First, fish do not make Omega-3s. They get it from eating smaller fish and algae from beneath the sea. We grow algae outside the sea as a direct, sustainable source of Omega-3s. Second, algae-source Omega-3s are more bioavailable than fish oil with no fishy reactions like bumps or upset stomachs.

What is the clinically recommended dosage of EPA/DHA and why is it better than krill oil?

The acceptable clinical dosage of EPA/DHA is 600 mg/daily according to the American Heart Association. The problem with krill oil is that it has very low content of EPA/DHA, approximately 200-250 mg/gm. This does not meet the clinical dosage of EPA/DHA while algae provides the necessary clinical dosage amount of EPA/DHA.

Why Summit Nutritions Vegetarian Omega-3s are better:

Why is algae based Omega-3s better than vegetable oil based Omega-3s?

Vegetable oils such as flaxseed and almond oil are good sources of Omega-3s but they are short chain Omega-3s, not long chain Omega-3s like EPA/DHA. Humans have a limited ability to synthesize short chain Omega-3s vs. long chain Omega-3s, requiring more vegetable oil Omega-3s to meet the amount of EPA/DHA. Algae based Omega-3s containing long chain Omega-3s supply the required (EPA/DHA) amount.

Why is “piperine” added into the formula?

Clinical studies have shown that piperine increases the absorption of other fat-soluble ingredients, like CoQ10, up to 30%.

What are non-animal gelatin softgels?

Typical consumer gelatine is derived from skin, bones, and animal tissue. Our gelatin is obtained solely from plants.

NSF Certified Organic Wholefood Multivitamins - Men's Total

100% Daily Value - of whole food-based formula, made from organic vegetables & herbs*

Fermented from Live Organic Cultured Probiotics*

More Bioavailable - with the ability to consume on an empty stomach*

Clinically Researched Formula - customized to address a man's unique needs with complete organ support thru 15 superfood complex*

Why Summit Nutritions Multivitamins are better:

What are "fermented vitamins" and how do they differ than traditional vitamin supplements?

Our vitamins are fermented with organic cultural media using live probiotics to make them more bioavailable, like whole food complex, so that the body recognizes them as natural substances, unlike traditional vitamins which are made in a lab using chemical synthesis processes.

Why are they microencapsulated?

Microencapsulation of ingredients protect vitamins while they are being digested through the harsh environment of the stomach, getting them safely into the intestine where vitamins get absorbed. Traditional vitamins get denatured in stomach acids and fail to reach the intestine. Most of us think we are getting vitamins by taking supplements but actually miss the benefits because they don't fully reach the intestine where they are absorbed into the blood stream.

Extra Strength 85 % HCA Garcinia Cambogia

100% Natural, with NO Fillers, Binders, Sugars or Artificial Ingredients

**Pure Natural Water Extracted
NO harsh solvents used**

Non-GMO and Gluten Free

Proven Fat-Blocker & Appetite Suppressant

Why Summit Nutritions Garcinia Cambogia is better:

What solvent is been used for extraction?

Unlike other products which used Acetone or Alcohol like Harsh solvent for extraction, we have only used the traditional Ayurveda method by using only natural water for extraction.

What is HCA complex and how much is in your product?

HCA (hydroxy citric acid) is the active ingredient from the Garcinia Cambogia fruit due to its weight loss benefits. With more HCA content you get better results. HCA by itself is unstable, as it is always present within its complex form in the salt of calcium or potassium (9%) , citric acid (3%), and lactone of HCA (3%). In theory, one can only achieve active HCA content up to 76%. We have successfully reached 72% active HCA content by using our patented extraction process yielding 85% HCA complex, the highest in class for these supplements.

How much calcium is added?

We haven't added calcium externally , the 45 mg of calcium per capsule is coming naturally from Garcinia Fruit.

Extra Strength 85 % HCA Garcinia Cambogia

Summit Nutritions™ manufactures premium quality natural dietary supplements. See insert for more about Summit Nutritions and all of our quality products.

Natural Calcium from Plant

No Fillers , No Binders and
No other ingredients

Other Ingredients: Water Extracted, Traditional Ayurveda Methods (no harsh chemical solvents used in processing), No Fillers, Binders, Sugars, or Artificial Ingredients.

Why Summit Nutritions Garcinia Cambogia is better:

What is the recommended dosage of Garcinia Cambogia?

Clinical studies have indicated that taking 1500–3000mg of Garcinia Cambogia is an effective dosage for weight loss. We have filled up 750mg of Garcinia Cambogia in a very fine particle size which provides more absorption in a more convenient vegetarian capsule size to deliver the recommended clinical dose.

Is it kosher, non-GMO and vegan? Yes, and gluten-free as well.

I've tried other Garcinia supplements with no success. Do you guarantee that your product will be effective?

First, supplements are different than drugs. Their onset of action is slow in comparison but treat the body naturally. Second, to get the desired benefits from supplements they must be taken in the clinical dosage amount in their purest form. Our supplements work best because they are of a premium quality and formulated in their clinical strength... AND they come with an unconditional money back guarantee.

Extra Bioavailable Organic Turmeric-Curcumin Complex

100% Natural, with NO Fillers, Binders, Sugars or Artificial Ingredients

Enhanced Bioavailable Formula With Piperine
Organic Turmeric Powder with 95% Curcuminoids

Non-GMO and Gluten Free

Powerful Anti-Inflammatory & Proven Anti-Oxidant

Why Summit Nutritions Turmeric - Curcumin is better:

Is Curcumin Proven Safe?

Yes: Safety evaluation studies show curcumin is well tolerated at very high doses without any adverse effects. For centuries, curcumin has been consumed as a dietary spice at doses up to 100 mg per day. Recent human clinical trials found no toxicity and no adverse side effects in curcumin when administered at doses of 8,000 milligrams per day for three months

What is curcumin?

Turmeric is formed by 3 kinds of curcuminoids, which are curcumin, demethoxycurcumin, and bisdemethoxycurcumin. Curcumin and other curcuminoids are the active substances in turmeric the substances with healing properties, which also gives it bright yellow – orange color . However, they comprise only a small percentage of turmeric powder (2-9%). That is why it is much more effective to take pure curcumin (in capsule or powder form) than taking just ground turmeric.

Extra Bioavailable Organic Turmeric-Curcumin Complex

Summit Nutritions™ manufactures premium quality natural dietary supplements. See insert for more about Summit Nutritions and all of our quality products.

Piperine added to enhance
Bioavailability

No Fillers, Binders and other
ingredients

Other Ingredients:

No Fillers, Binders, Sugars, or Artificial Ingredients.

Why Summit Nutritions Turmeric - Curcumin is better:

What is the source of turmeric?

Turmeric is derived from the rhizomes (underground stems) of the plant *Curcuma longa*, a member of the ginger family.

What is the role of piperine in turmeric supplement?

One problem with curcumin is its low bioavailability. Most of the curcumin that is ingested gets metabolized before it can get absorbed. Piperine helps to make curcumin more bioavailable. This could be because it could inhibit certain intestinal digestive enzymes. One study found that when even 2g of curcumin was ingested, its serum levels were very low. However, when 20mg piperine was added to curcumin the bioavailability increased by 2000%.

Extra Bioavailable Marine Hydrolyzed Collagen

7x more bioavailable than bovine collagen

More peptides than bovine

Made from fish skin without fishy character

Easily dissolves in liquid of choice

Why Do We Need Collagen?

Collagen is the basic building block of our cells which keeps cells firm and helps them maintain their structure and resiliency and youthful appearance. Collagen is responsible for the maintenance, strength, and flexibility of healthy bones, joints, skin, tendons, ligaments, hair, nails, blood vessels, eyes and internal organs. In the body, after the age of 30 the body's collagen and elastin production starts to slow down. As we continue to grow older, the body's ability to produce collagen becomes slower and slower and collagen levels decline. Collagen is a polypeptide fibrous protein and is a major component of connective tissue and forms strong fiber bundles for cartilage, tendons, bones, and skin to give them structure, rigidity and strength. That's why when collagen bundles decrease this causes the appearance of fine lines, wrinkles and saggy skin to become more noticeable.

Why Do Collagen Levels Decline?

Collagen levels may decline due to increasing age, age, a diet high in process foods and sweets, consuming hydrogenated oils, nutritional deficiencies, drinking alcohol, stress, high levels of sunlight exposure, dehydration, health related trauma and even depression. Reduced collagen levels causes the age-related appearance including: fine lines, wrinkles, thinning hair and hair loss, and the appearance of cellulite and other visible signs of aging. Clinical studies have proven that pure marine collagen supplements can reverse the declining levels of collagen. Proper pure marine collagen supplementation can help restore and repair the cellular damage caused by low collagen levels.

Extra Bioavailable Marine Hydrolyzed Collagen

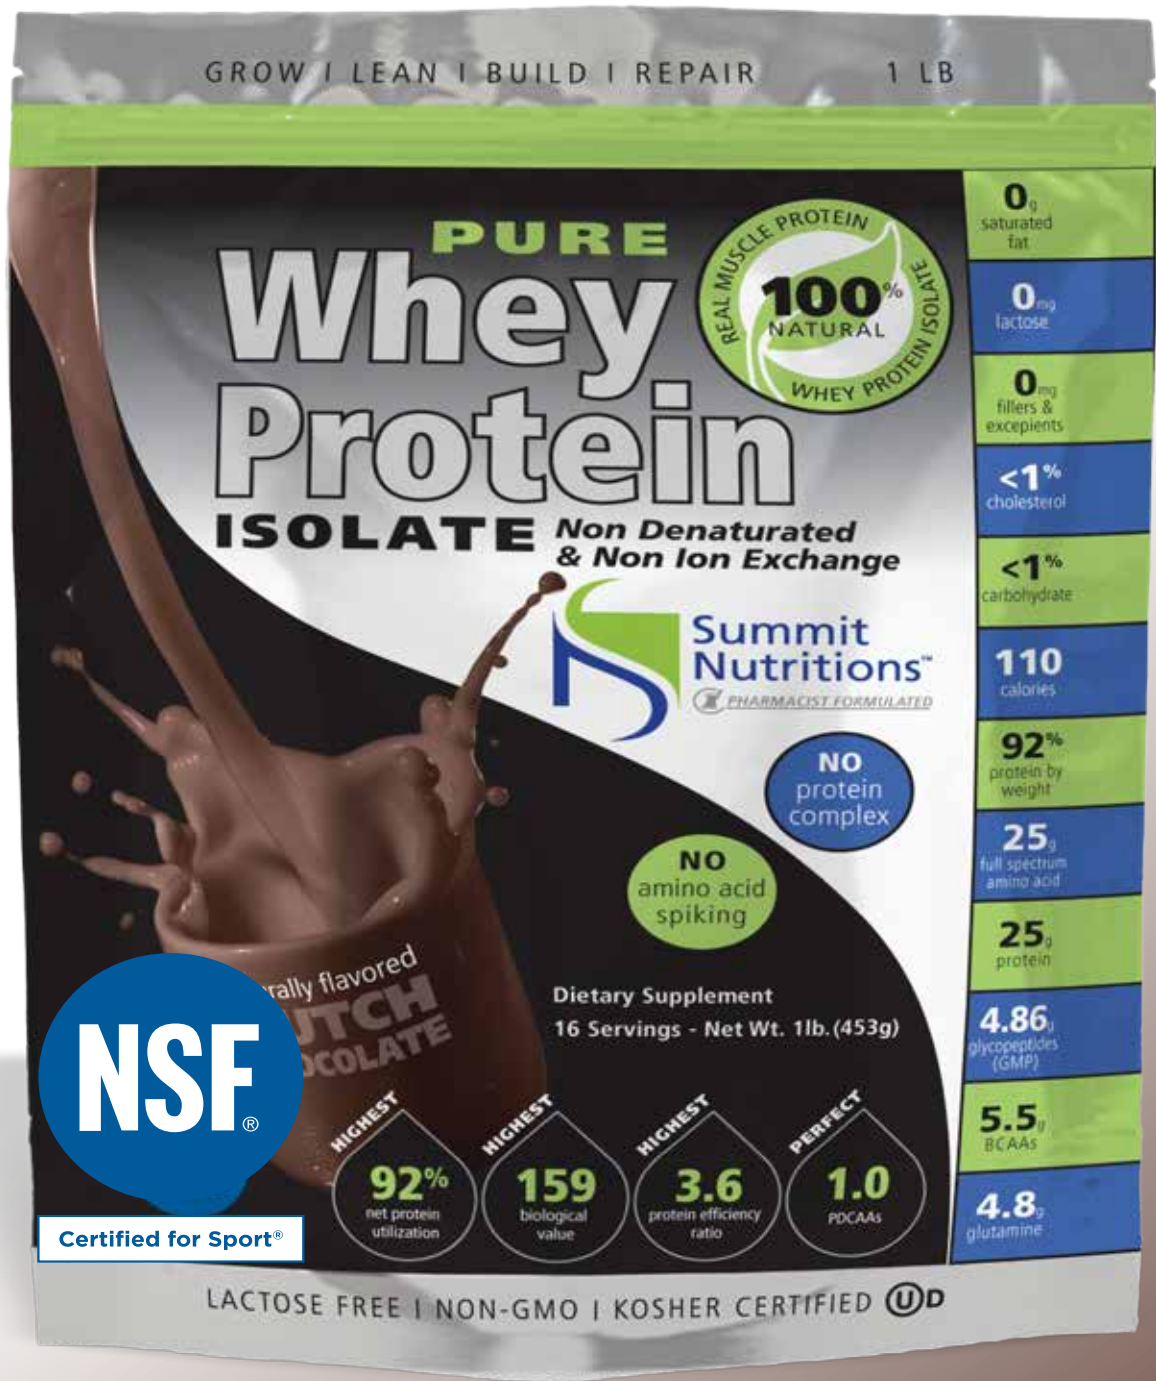

What Is Pure Marine Collagen??

Collagen supplements and skincare products derive collagen from four main sources: bovine (cows), porcine (pigs), chicken collagen and fish (marine) collagen. Bovine, porcine and chicken collagen are cheaper and more common than fish (marine) collagen. Collagen from cows, pigs and chickens are extracted from their skin, tendons and cartilage. They are mainly Type II collagen (for joints and tendons) and very little Type I. Fish collagen, also known as 'marine collagen', is extracted from either the skin or scales of cold sea fish and is primarily Type I and Type III collagen. Fish collagen has been shown to have superior "bioavailability". Pure Marine Collagen contains peptides similar to amino acids. Hydrolyzed collagen is used by the body for several processes and helps to regenerate cells in the body, boosts lean muscle, helps burn off fat, reduces food cravings and even helps repair problems with joint pain and arthritis. Anti-aging collagen can be applied as topical skin creams, but clinical studies have shown that oral collagen supplements in tablet, powder or liquid form are more effective in boosting and maintaining natural production levels of collagen in the body. Supplementation to produce higher collagen levels help to reduce skin sagging, eliminates fine lines and wrinkles, and other visible signs of aging.

How Does Pure Marine Collagen Work?

The best marine collagen protein is pre-digested by breaking down the amino acid chain by a hydrolysis process to lower the molecular weight. This makes the collagen producing protein much more soluble so the body can more easily utilize it. The collagen peptides supply an important amino acid composition that meets specific requirements for the body to produce natural collagen. Pure Marine Collagen is a natural rejuvenating food source that replenishes the body's own collagen supply and provides essential nutrients to re-build collagen cells and restore more youthful cell production.
